

Dear FCC:

I am an amateur radio operator but not an electrical engineer. I do, however, possess a degree in engineering which allows me to follow along when many very knowledgeable EEs explain why BPL is a very bad idea. Their credentials are so strong that it is not appropriate to ignore their warnings that BPL will cause unacceptable RF interference throughout the HF RF spectrum to at least 100MHz. This part of the spectrum is currently, and has been for many, many years, utilized by not only the amateur radio service, but also by the military, and by the shortwave broadcast stations of nearly all countries. I believe that BPL is a very bad idea and I totally OPPOSE its implementation.

Thank you for reading this comment.
